

# CHANDAN KUMAR.

Software Engineer II, Deloitte USI | Forward Deployed AI Engineering — Agentic AI · Full-Stack · AI Security

📞 +91 62909 09518 ✉️ [ravchandan15@gmail.com](mailto:ravchandan15@gmail.com) 🌐 [aurawithrav.com](http://aurawithrav.com) (live) 🐙 GitHub 📈 67 Merged PRs 🔗 LinkedIn 📁 Portfolio

## Professional Summary

**Software Engineer II at Deloitte USI** (Agentic AI & AI Security) who works the forward-deployed way, taking ambiguous problems all the way to production: **scope** the problem, **build** the full stack (Python/Java backends, Angular/React frontends, LangGraph agents), **integrate** with existing systems, **harden** it with tests and guardrails, and **ship and run** it. Owns two live AI products end to end: [aurawithrav.com](http://aurawithrav.com) and [aaina-ai.vercel.app](http://aaina-ai.vercel.app). 4+ years of backend and distributed-systems engineering in banking and aviation, and **66 open-source PRs merged** after review by external maintainers.

## Technical Skills

|                    |                                                                                            |
|--------------------|--------------------------------------------------------------------------------------------|
| <b>Agentic AI</b>  | LLMs, LangGraph, LangChain, multi-agent systems, tool calling, RAG, AI evaluation          |
| <b>Full-Stack</b>  | Python, Java, TypeScript, FastAPI, Spring Boot, Angular, React, REST, SSE / WebSockets     |
| <b>Integration</b> | SDKs, JWT / RBAC, multi-tenant APIs, Kafka, event-driven systems, LLM provider abstraction |
| <b>Production</b>  | Docker, Kubernetes, AWS, Vercel, Render, CI/CD, Redis, PostgreSQL, caching, observability  |
| <b>AI Security</b> | Prompt-injection defence, PII protection, output validation, guardrails, secure tool use   |
| <b>Delivery</b>    | Discovery and scoping, system design, technical writing, demos, code review                |

## Professional Experience

|                                                                                                                                                                                                                                                      |                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| <b>Deloitte USI</b>   <i>Software Engineer II</i>                                                                                                                                                                                                    | Sep 2026 – Present   <i>Bengaluru</i>   |
| Agentic AI and AI Security on an enterprise agentic application / harness platform for engineering and security workflows.<br>Building agentic capabilities with a focus on integration into existing workflows, reliability and secure AI adoption. |                                         |
| <b>Infosys — Bank of America</b>   <i>Senior Software Engineer</i>                                                                                                                                                                                   | Nov 2025 – Sep 2026   <i>Pune</i>       |
| Integrated LLM APIs into Spring Boot services and built event-driven, Kafka-based AI microservices inside a regulated banking environment; improved system efficiency by 40%.                                                                        |                                         |
| <b>Nexsys — Accelya</b>   <i>Software Engineer</i>                                                                                                                                                                                                   | Dec 2023 – Oct 2025   <i>Mumbai</i>     |
| Built scalable microservices for aviation systems processing 500K+ daily transactions.                                                                                                                                                               |                                         |
| <b>Texala</b>   <i>Software Engineer</i>                                                                                                                                                                                                             | May 2023 – Dec 2023   <i>Pune</i>       |
| Developed production-grade microservices and scalable enterprise APIs.                                                                                                                                                                               |                                         |
| <b>Flyboard Ventures</b>   <i>Software Engineer</i>                                                                                                                                                                                                  | Aug 2022 – May 2023   <i>Chandigarh</i> |
| Shipped e-commerce, healthcare and e-learning products end to end, including APIs serving thousands of concurrent users.                                                                                                                             |                                         |

## Production & Engineering Projects

|                                                                                                                                                                                                                                                                                                                                                                       |                          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|
| <b>Aura with Rav — live in production — <a href="http://aurawithrav.com">aurawithrav.com</a></b>                                                                                                                                                                                                                                                                      | <i>Owner, end to end</i> |
| Designed, built, deployed and run a public AI product: Angular front end on Vercel, Dockerized FastAPI + LangGraph back end on Render, custom domain, HTTPS, sign-up and health monitoring.<br>Multi-agent pipeline with security and persona-injection checks, domain agents, a hallucination check, a grammar pass and human approval before a reading is released. |                          |
| <b>Aaina — live in production — <a href="http://aaina-ai.vercel.app">aaina-ai.vercel.app</a></b>                                                                                                                                                                                                                                                                      | <i>Owner, end to end</i> |
| Multi-tenant AI salon mirror: seven agents run as a YAML-defined DAG with schema checks and rule fallbacks; face shape measured on the phone (MediaPipe); Angular on Vercel, Dockerized FastAPI on Render; multi-tenant onboarding with signed tenant keys and daily caps.                                                                                            |                          |
| <b>Bench Resource Optimizer — Enterprise problem → RAG + multi-agent system</b>                                                                                                                                                                                                                                                                                       |                          |
| Matched bench engineers to project needs with hybrid RAG (FAISS + BM25) and multi-agent planning; hardened with semantic caching, circuit breakers, injection detection and 222 tests.                                                                                                                                                                                |                          |
| <b>Universal Agent — Integration without rewrites</b>                                                                                                                                                                                                                                                                                                                 |                          |
| One agent engine embedded in 4 apps through Angular, React and JS SDKs plus YAML config; LLM provider switched by configuration.                                                                                                                                                                                                                                      |                          |

## Open Source

**67 merged contributions** — pypdf (60), Joblib, Sentence Transformers, NLTK, Authlib — bug fixes, regression tests and reliability fixes, each through external maintainer review. All PRs
